

**Comprehensive training set with the platform of the maternal body for skills training in pelvic vaginal examination during labor and delivery assistance.**

## Features

### For all training skills

- Genital area made of innovative material that excels in elasticity, durability and resilience offers repetitive training opportunity.

### Delivery assistance

- Anatomically correct vaginal canal, ischial spine, pubic symphysis and coccyx that facilitate training with anatomical understanding.
- Elastic external genitalia, realistic shape of vaginal canal and the holding handle for the maternal body facilitate simulating a smooth delivery.

### Cervical examination

- Interchangeable five stages of cervical dilation module can be installed with a single action. Descent of the fetal head can also be set.

- Anatomically correct landmarks including the ischial spine and the pubic symphysis
- Anterior fontanelle to determine the fetal position.

### Perineorrhaphy (perineal repair)

- Repetitive suture training for the first-degree perineal tear.

\* Suturing instruments are not included.

## Cervical examination

### Training Skills

- Cervical examination
  - ▶ Determination of station using landmarks of the ischial spine and the pubic joint to assess the descent of the body
  - ▶ Assessment of cervical dilation
- Speculum examination
- Procedures of observation and cervical cytology
- Procedures of urine catheterization

Pelvic vaginal examination

Procedures of urine catheterization

\* For replacement parts, refer page 8.

## Delivery assistance

### Training Skills

- Delivery assistance for different delivery positions (dorsal, all-fours)
- Perineal protection
- Delivery of fetus (forceps delivery, vacuum extraction)
- Clamping, tying and cutting of the umbilical cord
- Delivery of placenta
- Insertion of a urine catheter

Perineal protection

Delivery assistance

Cutting the umbilical cord

Delivery of placenta

\* For replacement parts, refer page 9.

## Perineorrhaphy (perineal repair)

### Training Skills

- Perineorrhaphy
  - ▶ Single interrupted suture
  - ▶ Vertical mattress suture

Cutting the umbilical cord

### Specifications :

Common Components:	Parts for pelvic examination	Parts for Delivery Assistance	Parts for Perineorrhaphy
1 maternal body	1 vagina unit	1 fetus	1 genitalia unit
1 genitalia unit (for pelvic examination and delivery assistance)	1 set of cervical dilation module (5 variations)	1 placenta	(for perineorrhaphy)
1 talcum powder	1 holder for the cervical dilation module	3 umbilical cords for omphalotomy	
3 lubricant (150ml)		1 vat	
1 instruction manual		5 velamen sheets
